

Following our user testing, the following changes were made to the app:

- **Submit button made visible** - worked on CSS to ensure that the button was visible on the page without scrolling.
- **Colour overlay changed** - the colour overlay of the country was changed when it was clicked from green to orange.
 - Submit button - the user thought that the green overlay indicated that the map was selected, as such a 'submit button' didn't need to be clicked
 - Correct country selected - the user thought that the green overlay meant that they had selected the correct country.
- **Images of Yang** - our character was added to the famous landmarks to ensure that the narrative flowed
- **Landmark pin** - work was done on this to ensure it was clear
- **Voice over** - added to the app to indicate whether the user had guessed correctly
